

# GreenIntelli

## Sustainability Performance Management and Reporting

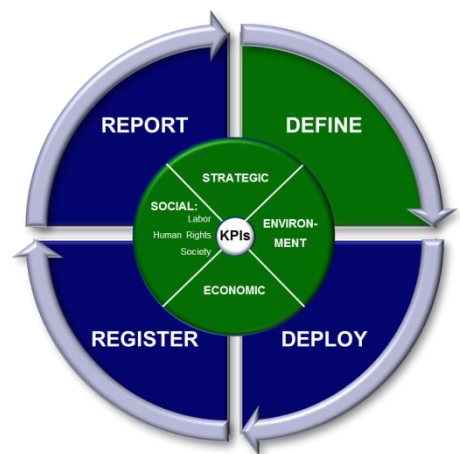

### GreenIntelli

GreenIntelli is a Sustainability Performance Management and Reporting platform that enables organizations to manage their performance related to Sustainability. GreenIntelli supports organizations to DEFINE their KPIs, organizational structures and supporting master data, to DEPLOY it within their IT landscape and their organizations and partners, to REGISTER sustainability data via a centrally controlled data collection process and to REPORT and analyze their sustainability performance from multiple reporting perspectives and visualizations.

GreenIntelli delivers standard content and can easily be adapted to your specific requirements and company look and feel. It has been designed to fit the needs of any small to large organization, independently of the maturity of Sustainability Performance Management and Reporting.

### Key Features

- Flexible set up to define your specific requirements and look and feel
- GRI G4 Certified and conversion according to WRI GHG Protocol
- Data Collection Process Control and Dynamic Period and Master data handling
- Reporting Multiple Reporting Perspectives and Additional dimensions
- Web based architecture supporting multiple standard BI technologies and integration to back-end systems

*“GreenIntelli has provided us with a powerful tool to track, manage and report against our sustainability KPI’s in an efficient and effective manner. Users find GreenIntelli straight-forward to use and flexible enough to adapt to our organizational needs as we further develop our sustainability initiatives.”*

**Justin Pariag - Tommy Hilfiger Europe**

# Sustainability Performance Management and Reporting

## Data collection made easy

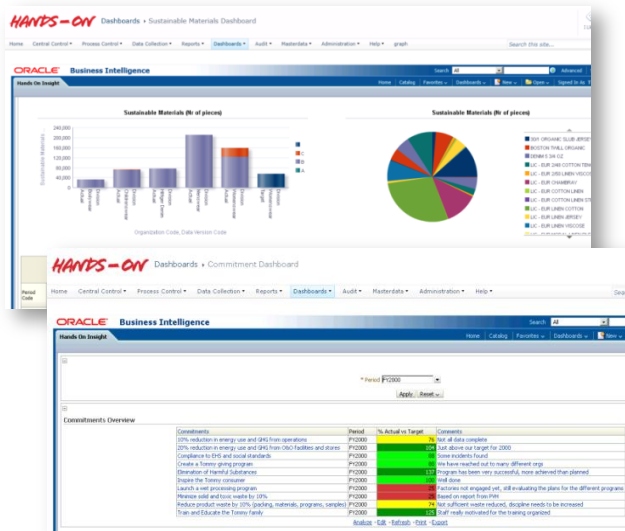

GreenIntelli supports data collection control via status reports and period management. Multiple reporting cycles can be managed simultaneously with different sets of master data.

Status management controls the task list via data submission, calculations and central approval status. This way you facilitate the data collection process and ensure that your sustainability data is correct and complete for any specific reporting cycle (including a full audit trail for history reporting).

KPI Code	KPI description	HQ	Office	Warehouse	Retail	Showroom	Logistics partner	Sample Distribution
VEN1 Facilities	0 GHG emissions from Facilities	●	●	●	●	●		●
	1 GHG energy use from electricity		●	●	●	●		●
	2 GHG energy use from natural gas		●	●	●	●		●
	3 Numbers of employees (FTE)		●	●	●	●		●
	4 Size/space of buildings		●	●	●	●		●
	5 Total pieces sold at retail				●	●		●
	6 Total pieces received at warehouse				●			●
VEN2 Business Travel	0 GHG emissions from Business Travel	●	●					
1 GHG emissions - Business travel Air - Domestic/Economy		●						
2 GHG emissions - Business travel Air - Domestic/Business		●						
3 GHG emissions - Business travel Air - Domestic/First class		●						

## Multi purpose and Integrated BI architecture

A Sustainability Performance Management Model is used to structure your KPI and Organizational master data for multiple reporting perspectives. This way you can analyze performance from your point of view and support multiple purposes of (internal and external) performance reporting. GreenIntelli can be fully integrated with your current BI architecture to allow back-end integration and alignment to your company look and feel.

## Why GreenIntelli?

- Cost effective: *Think big, act small*
- Easy to customize and easy to use
- Controls data collection process
- Multi purpose data reporting platform
- Integration with your BI architecture
- GRI G4 certified

## About GreenIntelli

GreenIntelli has been designed and developed by QVS Consulting in the Netherlands. QVS Consulting is an independent management consultancy firm that specializes in Finance, Business Intelligence and Sustainability for large organizations and multinationals.

QVS Consulting has combined their knowledge and experience of Financial Consolidation & Reporting, Management Reporting, ERP, Business Intelligence and Sustainability to develop a Sustainability Performance Management platform. QVS Consulting has a track record of business improvement projects and change management and this greatly benefits the design, the continuous development and implementation of GreenIntelli.
